

ROYAL TINT™
PAINT PROTECTION FILM

VIRTUALLY
INVISIBLE
PROTECTION

PAINT PROTECTION FILM

Our Paint Protection Film is your best bet to preserving the new-look of your vehicle. This is an invisible film that keeps your vehicle looking new for a long period. The film doesn't interfere with any design or features or color of the vehicle. It protects the high-risk areas like hoods, side mirrors, front bumpers, door handle cavities, door edges, rocker panels, and rear fender panels. The Paint Protection Film will not only preserve the new look of your vehicle but will also ensure a higher resale value of the vehicle in the future.

**DON'T FEAR ABOUT CHIPS, SCRATCHES,
ROCKS, SAND AND SALT ON INDIAN ROADS.**

Love driving but afraid of the wild roads of India? The fear of getting your new car damaged is horrifying and as a solution, we suggest adding a layer of our RoyalTint car paint protection film. After the application of this barely visible film, the only thing you will have to worry about is following traffic rules.

We provide two different protection films. Whichever you choose according to your requirements- Paint Protection Film for durability and Platinum Protection for advanced armor is sure to satisfy your needs.

SELF-HEALING COATING

The ability to heal is an advanced feature inside the film's coating called thermoplastic polyurethane (TPU), a flexible thermoplastic layer that can self-heal once damage occurs. Slight abrasions, scratches or outdoor hazards can be easily averted with these time-tested products.

IMPROVED GLOSS

As light passes through the film it illuminates the paint color giving it a shiny glazed appearance. Silicone elements in the substrate also enhance the original paint producing a smooth high-gloss finish.

STAIN RESISTANCE

The anti-stain protection comes from polyurethane dispersion (PUD), which is a self-cross-linking technology that enhances coating properties, such as hardness, water, and solvent resistance

Tough Defense Against the Harsh Road

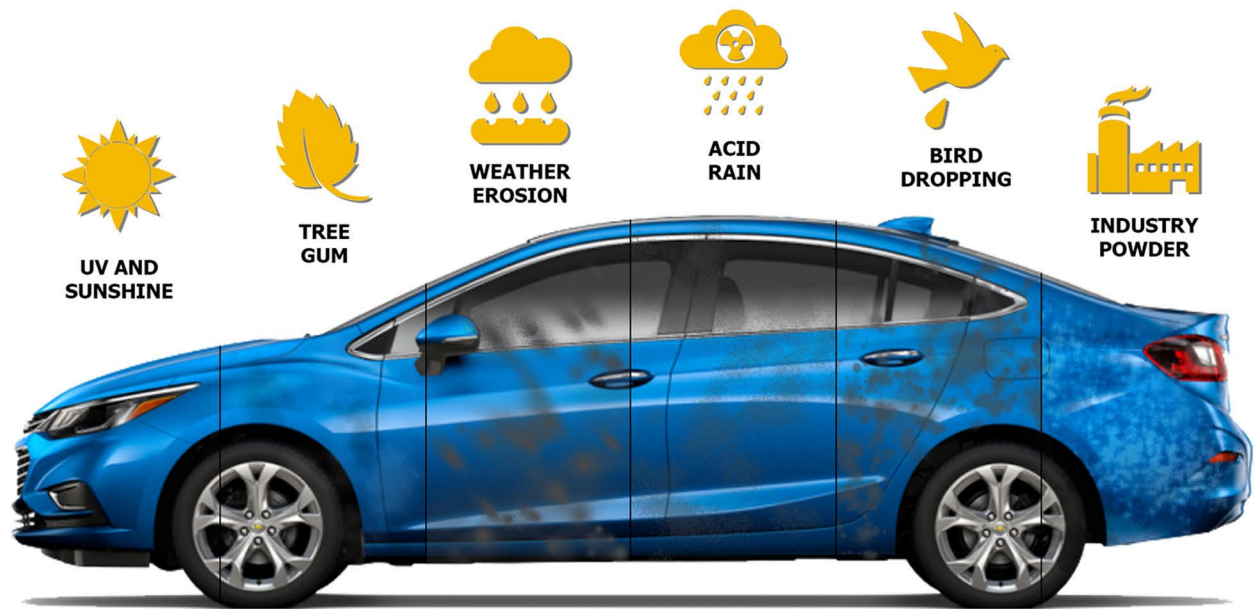

RoyalTint Paint Protection products are self-healing and heat-curable because of a flexible component in the film, thermoplastic polyurethane (Signature – TPU). This class of films has many chemically enhanced properties including elasticity, transparency, stain and abrasion resistance. A combination of hard and soft co-polymers reacts to rebind and retain their shape causing these PPF films to reseal and heal themselves.

DURING APPLICATION

AFTER APPLICATION

Protect Your CAR With **ROYAL TINT** Paint Protection Film

BENEFITS OF PPF

Paint Protection film provides you the long lasting protection of your vehicle. Even if any scratches can be happen but your actual car color remaining same.
